

Self-taught frontend engineer focused on polished, accessible web products with React, Next.js, and TypeScript. I enjoy complex UI work, thoughtful interactions, and turning product ideas into responsive interfaces.

A fast, hands-on learner who adapts quickly to unfamiliar tools and wants to keep growing through ambitious products and strong engineering teams. Available for full-time, contract, and freelance roles.

TECHNICAL SKILLS

|                        |                                                                                                                  |
|------------------------|------------------------------------------------------------------------------------------------------------------|
| Frontend               | Next.js (App Router, RSC, server actions), React, Tailwind CSS, shadcn/ui, Framer Motion, Zustand, Redux Toolkit |
| Languages              | TypeScript, JavaScript, HTML, CSS, Move                                                                          |
| Backend & Data         | Node.js, Express, PostgreSQL, MongoDB, Redis, ClickHouse                                                         |
| Web3                   | Sui, Move smart contracts, Walrus decentralized storage, Seal encryption                                         |
| Infrastructure & Tools | Docker, AWS, Vercel, Railway, GitHub Actions, Git, Figma, Turborepo                                              |

EXPERIENCE

Fullstack Developer at Formo Sep 2025 - May 2026

- Designed and shipped product features for a Web2/Web3 analytics platform in a three-person engineering team.
- Built responsive Next.js interfaces and integrated them with Express services backed by PostgreSQL, Redis, and ClickHouse.
- Tested releases, investigated user-reported issues, fixed defects, and kept technical documentation current.

Frontend Developer Intern at FPT Software Sep 2024 - May 2025

- Led the frontend internship team on FAMS, a student management application delivered by a 10-person project team.
- Created the shared UI foundation in Next.js and React, managed client state with Redux Toolkit, and coordinated API integration with the backend team.

SELECTED PROJECTS

|            |        |                                                                                           |                               |
|------------|--------|-------------------------------------------------------------------------------------------|-------------------------------|
| WalForm    | Source | Drag-and-drop on-chain form builder with encrypted submissions and decentralized storage. | Next.js / Sui / Walrus / Seal |
| Sui Stream | Live   | Responsive on-chain video experience powered by Walrus storage and Sui smart contracts.   | Next.js / TypeScript / Sui    |
| Portfolio  | Source | Component-driven portfolio with interactive UI, typed content, and dark mode.             | Next.js / Tailwind / shadcn   |

EDUCATION & RECOGNITION

FPT University Bachelor of Software Engineering | GPA 3.08/4.00 Oct 2021 - May 2025

|        |             |                                        |                         |
|--------|-------------|----------------------------------------|-------------------------|
| Awards | Top 1       | - Walrus Session 2, Form Tooling track | WalForm · 2026          |
|        | Top 2       | - First Mover Hackathon                | Relic of Lie · Feb 2026 |
|        | Participant | - CommandOSS HackerHouse               | Sui Stream · Apr 2026   |
